DETAILED ACTION

Response to Arguments

Applicant's arguments, filed 5/24/05, with respect to the 102(e), 103(a) and double patenting rejections have been fully considered and are persuasive. Therefore, these rejections have been withdrawn.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-16 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of U.S. Patent No. 6,707,148. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both claim:

An optical and electrical apparatus comprising: a packaged integrated circuit that includes, an integrated circuit having a first surface and a second surface, the first

Art Unit: 2891

surface having a first set of light emitting or sensing devices and a plurality of bond pads; a conductive bump formed on each of the respective bond pads; a clear molding material that encapsulates the integrated circuit and a portion of each conductive bump such that each conductive bump is partially exposed through the clear molding material, whereby light can pass through the clear molding material and reach the first set of light emitting or sensing devices.

The only difference is that the patent further claims: an electrical substrate having a plurality of electrical contact points and a first aperture wherein the packaged integrated circuit is positioned together with the electrical substrate wherein at least some of the conductive bumps are connected to respective electrical contact points and wherein the first aperture is located over the first set of light emitting or sensing devices.

Therefore the present claims are broader than the patented claims, making a double patenting rejection proper.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The art cited but not relied upon teach the state of the art.
